

## Mathematics Vision of the Companies' Growth with Educational Technologies

**Authors :** Valencia P. L. Rodrigo, Morita A. Adelina, Vargas V. Martin

**Abstract :** This proposal consists of an analysis of macro concepts involved within an organization growth using educational technologies, which will relate each concept, in a mathematical way with a vision of harmonic work. Working collaboratively, competitively and cooperatively so that this growth is harmonious and homogenous, coining a new term, Harmonic Work. The Harmonic Work ensures that the organization grows in all business directions, allowing managers to project a much more accurate growth, making clear the contribution of each department, resulting in an algorithm that analyzes each of the variables both endogenous and exogenous, establishing different performance indicators in its process of growth.

**Keywords :** business projection, collaboration, competitiveness, educational technology, harmonious growth
