

Application of Wireless Sensor Networks: A Survey in Thailand

Authors : Sathapath Kilaso

Abstract : Nowadays, Today, wireless sensor networks are an important technology that works with Internet of Things. It is receiving various data from many sensor. Then sent to processing or storing. By wireless network or through the Internet. The devices around us are intelligent, can receiving/transmitting and processing data and communicating through the system. There are many applications of wireless sensor networks, such as smart city, smart farm, environmental management, weather. This article will explore the use of wireless sensor networks in Thailand and collect data from Thai Thesis database in 2012-2017. How to Implementing Wireless Sensor Network Technology. Advantage from this study To know the usage wireless technology in many fields. This will be beneficial for future research. In this study was found the most widely used wireless sensor network in agriculture field. Especially for smart farms. And the second is the adoption of the environment. Such as weather stations and water inspection.

Keywords : wireless sensor network, smart city, survey, Adhoc Network

Conference Title : ICCTA 2018 : International Conference on Computer Technologies and Applications

Conference Location : Paris, France

Conference Dates : January 25-26, 2018
