

## Biological Activities of *Gentiana brachyphylla* Vill. Herba from Turkey

**Authors :** Hulya Tuba Kiyan, Nilgun Ozturk

**Abstract :** *Gentiana*, a member of Gentianaceae, is represented by approximately 400 species in the world and 12 species in Turkey. Flavonoids, iridoids, triterpenoids and also xanthones are the major compounds of this genus, have been previously reported to have antiinflammatory, antimicrobial, antioxidant, hepatoprotective, hypotensive, hypoglycaemic, DNA repair and immunomodulatory properties. The methanolic extract of the aerial parts of *Gentiana brachyphylla* Vill. from Turkey was evaluated for its biological activities and its total phenolic content in the present study. According to the antioxidant activity results, *G. brachyphylla* methanolic extract showed very strong anti-DNA damage antioxidant activity with an inhibition of 81.82%. It showed weak ferric-reducing power with a EC50 value of 0.65 when compared to BHT (EC50 = 0.2). Also, at 0.5 mg/ml concentration, the methanolic extract inhibited ABTS radical cation activity with an inhibition of 20.13% when compared to Trolox (79.01%). Chelating ability of *G. brachyphylla* was 44.71% whereas EDTA showed 78.87% chelating activity at 0.2 mg/ml. Also *G. brachyphylla* showed weak 27.21% AChE, 20.23% BChE, strong 67.86% MAO-A and moderate 50.06% MAO-B, weak 19.14% COX-1, 29.11% COX-2 inhibitory activities at 0.25 mg/ml. The total phenolic content of *G. brachyphylla* was  $156.23 \pm 2.73$  mg gallic acid equivalent/100 g extract.
