

An Analytical Exploration of the Gender-Corruption Thesis in the Nigerian Context

Authors : Francisca Anene

Abstract : Studies indicate that gender equality and corruption are negatively correlated. This has been attributed to two opposing arguments - 'fairer-sex' and 'fairer-system'. Though there is no agreement on the reason for the correlation, it has been suggested that gender equality can be actively pursued as a means of combating corruption and instituting good governance in countries perceived to be more corrupt. This paper explores the relationship between gender, corruption and good governance in Nigeria. With the aid of secondary empirical data from various sources including Transparency International Corruption Perceptions Index, World Values Survey, World Bank Enterprise Survey and Afrobarometer, a correlation is established between gender and corruption and the causative factors are explored in the Nigerian context. On the basis of the above, the paper demonstrates that though a numerical increase of women in leadership/influence may result in the achievement of gender equality in Nigeria, true equality must go beyond numbers if it is to be used as a means for instituting good governance.

Keywords : corruption, gender equality, good governance, Nigeria

Conference Title : ICAGGHR 2018 : International Conference on Anti-Corruption, Good Governance and Human Rights

Conference Location : Madrid, Spain

Conference Dates : March 26-27, 2018
