

Interactions within the School Setting and Their Potential Impact on the Wellbeing or Educational Success of High Ability Students: A Literature Review

Authors : Susan Burkett-McKee, Bruce Knight, Michelle Vanderburg

Abstract : The wellbeing and educational success of high ability students are interrelated concepts with each potentially hindering or enhancing the other. A student's well-being and educational success are also influenced by intrapersonal and interpersonal factors. This presentation begins with an exploration of the literature pertinent to the wellbeing and educational success of this cohort before an ecological perspective is taken to discuss research into the impact of interactions within the school context. While the literature consistently states that interactions exchanged between high ability students and school community members impact the students' wellbeing or educational success, no consensus has been reached about whether the impact is positive or negative. Findings from the review shared in this presentation inform an interpretative phenomenological study involving senior secondary students enrolled in inclusive Australian schools to highlight, from the students' perspective, the ways school-based interactions impact their wellbeing or educational success.

Keywords : educational success, interactions, literature review, wellbeing

Conference Title : ICGESEN 2018 : International Conference on Gifted Education and Supporting Emotional Needs of Gifted

Conference Location : Sydney, Australia

Conference Dates : March 29-30, 2018
