

An Analysis and Design of Mobile Payment System Based on NFC Technology

Authors : Shafiq ur Rehman, Zubair Ahmed Shaikh

Abstract : This research provides the comparative study of different mobile payment system and proposes an efficient solution of mobile payment system. The research involves discovering how the mobile payment methods can be used and implemented keeping user and system interaction under consideration. The implementation of Nielsen's heuristic and universal design principles enhanced the user's interaction design and made the system more appropriate, understandable and visible to the end user. The design of application is greatly affected by the user driven factors. These factors help in the efficiency of the application usage.

Keywords : mobile payment system, m-commerce, usability, near field communication

Conference Title : ICCSET 2014 : International Conference on Computer Science, Engineering and Technology

Conference Location : Toronto, Canada

Conference Dates : June 16-17, 2014
