

Poetry as Valuable Tool for Tackling Climate Change and Environmental Pollution

Authors : Benjamin Anabaraonye

Abstract : Our environment is our entitlement, and it is our duty to guard it for the safety of our society. It is, therefore, in our best interest to explore the necessary tools required to tackle the issues of environmental pollution which are major causes of climate change. Poetry has been discovered through our study as a valuable tool for tackling climate change and environmental pollution. This study explores the science of poetry and how important it is for scientists and engineers to develop their creativity to obtain relevant skills needed to tackle these global challenges. Poetry has been discovered as a great tool for climate change education which in turn brings about climate change adaptation and mitigation. This paper is, therefore, a clarion and urgent call for us to rise to our responsibility for a sustainable future.

Keywords : climate change, education, environment, poetry

Conference Title : ICECC 2018 : International Conference on Environment and Climate Change

Conference Location : Singapore, Singapore

Conference Dates : March 22-23, 2018
