

Spectroscopic Studies of Dy³⁺ Ions in Alkaline-Earth Boro Tellurite Glasses for Optoelectronic Devices

Authors : K. Swapna

Abstract : A Series of Alkali-Earth Boro Tellurite (AEBT) glasses doped with different concentrations of Dy³⁺ ions have been prepared by using melt quenching technique and characterized through spectroscopic techniques such as optical absorption, excitation, emission and photoluminescence decay to understand their utility in optoelectronic devices such as lasers and white light emitting diodes (w-LEDs). Raman spectrum recorded for an undoped glass is used to measure the phonon energy of the host glass and various functional groups present in the host glass (AEBT). The intensities of the electronic transitions and the ligand environment around the Dy³⁺ ions were studied by applying Judd-Ofelt (J-O) theory to the recorded absorption spectra of the glasses. The evaluated J-O parameters are subsequently used to measure various radiative parameters such as transition probability (AR), radiative branching ratio (βR) and radiative lifetimes (τR) for the prominent fluorescent levels of Dy³⁺ ions in the as-prepared glasses. The luminescence spectra recorded at 387 nm excitation show three emission transitions (⁴F_{9/2}→⁶H_{15/2} (blue), ⁴F_{9/2}→⁶H_{13/2} (yellow) and ⁴F_{9/2}→⁶H_{11/2} (red)) of which the yellow transition observed at 575 nm is found to be highly intense. The experimental branching ratio (β_{exp}) and stimulated emission crosssection (σ_{se}) were measured from luminescence spectra. The experimental lifetimes (τ_{exp}) measured from the decay spectral profiles are combined with radiative lifetimes to measure quantum efficiencies of the as-prepared glasses. The yellow to blue intensity ratios and chromaticity color coordinates are found to vary with Dy³⁺ ion concentrations. The aforementioned results reveal that these glasses are aptly suitable for w-LEDs and laser devices.

Keywords : glasses, J-O parameters, photoluminescence, I-H model

Conference Title : ICGST 2018 : International Conference on Glass Science and Technology

Conference Location : New York, United States

Conference Dates : October 08-09, 2018
