

Pruning Residue Effects on Symbiotic N₂ Fixation and δ¹³C Isotopic Composition of *Sesbania sesban* and *Cajanus cajan*

Authors : I. T. Makhubedu, B. A. Letty, P. F. Scogings, P. L. Mafongoya

Abstract : Despite their potential importance in recycling dinitrogen (N₂) fixed in alley cropping systems, the effects of tree pruning residues on symbiotic N₂ fixation are poorly studied. A 2 x 2 x 2 factorial experiment was conducted to evaluate the effects of pruning residue management and pruning date on symbiotic performance and

Keywords : alley cropping, management, N₂ fixed, natural abundance, recycling

Conference Title : ICAB 2018 : International Conference on Agriculture and Biotechnology

Conference Location : Cape Town, South Africa

Conference Dates : November 15-16, 2018
